21. (Once amended) A method for presenting inventory items, comprising:

providing a plurality of stores which are separated from each other by elongate walls, each wall having a doorway, with the doorways being aligned with each other;

standing in an aisle which passes through each doorway;

[and]

looking down the aisle and visualizing at least some of the interior of each store,

selecting an item within one of the stores; and

purchasing the item while within the store.

22. (As filed) A method as in claim 21, further comprising moving away from the aisle and visually scanning the inventory of items within one of the stores, wherein visualization of the inventory items in the other stores is substantially prevented by the walls.

23. (As filed) A method as in claim 21, wherein the walls have a pair of doorways, wherein the aisle circuits through each store while passing through the doorways, and further

comprising walking the length of the aisle to circuit through each building.

24. (As filed) A method as in claim 21, wherein each store includes a unique group of inventory items, and wherein the dividers are arranged such that a customer when within a particular store can generally visualize only one of the unique groups of items at any given location within the store.

25. (As filed) A method for presenting inventory items, the method comprising:

providing a plurality of stores which are separated from each other by an elongate wall, each wall having a doorway, and wherein the doorways are in alignment with each other;

standing in the aisle and looking the length of the aisle to visualize at least part of the interior of each store;

selecting a desired store;

walking along the aisle until within the desired store;

visually scanning the inventory of items within the desired store while standing away from the aisle, wherein visualization of the inventory items in the other stores is substantially prevented by the walls; and

selecting a desired item within the desired store.

26. (As filed) A method as in claim 25, further comprising returning to the aisle and selecting another store.

27. (As filed) A method as in claim 25, wherein the walls have a pair of doorways, wherein the aisle circuits through each store while passing through the doorways, and further comprising walking the length of the aisle to circuit through each building.

28. (As filed) A method as in claim 25, further comprising entering one of the stores through an outside entrance.

29. (As filed) A method as in claim 25, wherein the inventory items in each store are different from each other.

30. (As filed) A method as in claim 25, wherein each store is independently managed.

Sub B6

31. (Once amended) A method for enhancing display space within a building, the method comprising:

providing a building comprising a set of outer walls which define an interior;

dividing the building into a plurality of separate stores by placing a plurality of dividers within the interior, wherein each divider includes at least one opening therein to allow customers to pass through each of the stores along an aisle;

supplying each store with a unique group of inventory items; and

a customer walking through each of the stores, with the dividers being arranged such that generally only one of the unique groups of items can be visualized at any given location within the interior when off the aisle.

32. (As filed) A method as in claim 31, wherein the dividers have two openings and an aisle which circuits through each of the openings, and walking along the aisle to circuit the interior.

33. (As filed) A method as in claim 31, further comprising standing in the aisle and looking the length of the aisle to visualize at least part of the interior of each store.

34. (As filed) A method as in claim 31, further comprising entering one of the stores through an outside entrance.
